SUMMARY

An aspiring UI/UX/Frontend developer currently pursuing an AP degree at the University of Northern Denmark. The ability to understand users' needs and their values helps me in developing quality products by improving the information architecture which leads to a better user experience. A hard worker who sets high goals, I am always curious to learn more and do better.

EDUCATION

Multimedia Design

University College of Northern Denmark

📅 09/2020 - Ongoing

- Acquired invaluable knowledge of the process of how to apply current libraries and frameworks for innovative development and adjustment of advanced digital user interfaces.
- Gained insights into the different central theories, methods, and tools for strategic planning and content development.
- Learned about translate knowledge of current design and user trends into planning and developing user experiences in advanced digital media productions.
- Get the knowledge to assess and apply key methods and international development trends for planning, designing, and evaluating digital user experiences.
- Developed skills in web services and data exchange interfaces on the Internet. As well as key security aspects of authentication and authorization in multimedia applications.

PROJECTS

Svalegaarden MEST

📅 12/2020 - 01/2021 📍 Aalborg, Denmark

Svalgarden Mest is a company that provides catering services. Their website is the main source of attracting new clients. However, the website content was poorly structured and was lack of information. I worked in a team of four where our goal was to provide Svalgarden Mest with an updated design of their website which can lead to a better user experience.

- Created a separate B2C website that was focused more on telling a story regarding individual and unique experiences for every person and at every season, while showcasing the things that were important for the client and were representative for their brand.
- Provided user-centered design which contributed to inspiring and inviting people as well as easing the tasks for the users.
- Improved customer satisfaction by providing better visibility and readability of the website by applying different methods, theories, and tools.

PROJECTS

American football club – AaB 89ers

📅 05/2021 - 06/2021 📍 Aalborg, Denmark

Aalborg 89ers is an American football club. Their website is poorly structured and this makes difficult for users to navigate around and find the information they need. I was part of a team of four and we worked on organizing the content, creating a user-centered design to provide better user experiences.

- Gained insights into what's valuable, user interests, and what appeals to a specific target audience by using the user-centric method.
- We achieved to display the content on portraying the customer values and goals of being inclusive and supportive of each team member.
- We managed to create more meaningful categories for the users by using headless CMS and different testing methods and tools.

Free Book

📅 08/2021 - 09/2021 📍 Aalborg, Denmark

I worked in a team of two and we created FreeBook - a web app that goal was to motivate people to read and socialize more. The web app would allow users to exchange or donate books for free.

- Achieved to create easy to use interface for a positive and cohesive user experience.
- Learned about how to design and build reliable and secure REST API.
- Gained knowledge about data modeling and databases.
